

Bug Report

QuickBite — Online Food Delivery Web Application

18 Defects Logged • 3 Critical • 6 High • 7 Medium • 2 Low

Prepared by: QA Engineer | Document: Software_Testing_Bug_Report.pdf

1. Bug Summary

This report documents 18 defects identified during functional, validation, and basic security testing of QuickBite. Each defect is traced back to the specific test case that revealed it and carried through a full lifecycle from initial report to resolution.

Bug ID	Title	Module	Severity	Priority	Status
BUG-001	Weak password accepted without complexity validation	Registration	Medium	Medium	Closed
BUG-002	No account lockout after repeated failed login attempts	Login	Critical	Highest	In Progress
BUG-003	Cached protected page accessible via browser Back after logout	Logout	High	High	Fixed
BUG-004	Expired password reset link still allows password change	Account Recovery	High	High	Open
BUG-005	Unsupported file type accepted for profile picture upload	Profile	Medium	Medium	Fixed
BUG-006	Server error when searching with SQL meta-characters	Search	Medium	Medium	Closed
BUG-007	Combined filters are not applied cumulatively	Filters	Medium	Medium	Open
BUG-008	Out-of-stock item can be added to the cart and ordered	Cart	High	High	In Progress
BUG-009	Negative quantity accepted in cart quantity field	Cart	High	High	Fixed
BUG-010	Checkout proceeds despite order total below the configured minimum	Checkout	Medium	Medium	Fixed
BUG-011	Expired card is authorized by the sandbox payment gateway	Payment	Critical	Highest	Fixed
BUG-012	Live order tracking status does not update in real time	Order Tracking	High	High	Open
BUG-013	Users continue to receive promotional notifications after opting out	Notifications	Low	Medium	Closed
BUG-014	Address linked to an active order can be deleted, breaking the order	Address Book	High	High	Reopened
BUG-015	Promo code discount applies below its stated minimum order value	Promotions	Medium	Medium	In Progress
BUG-016	Server error page exposes stack trace and internal file paths	Error Handling	Medium	Medium	Open
BUG-017	SQL injection payload in login email field causes unhandled server error	Security	Critical	Highest	Open
BUG-018	Checkout submit button is cut off / overlapped at tablet width	UI/Responsiveness	Low	Low	Open

2. Detailed Bug Reports

BUG-001 — Weak password accepted without complexity validation

Linked Test Case	TC-003
Module	Registration
Environment	Staging environment — https://staging.quickbite-demo.app , API v1.4, seeded test database, sandbox payment gateway.
Severity	Medium
Priority	Medium
Bug Type	Functional
Reproducibility	Always
Status	Closed
Assigned To	Backend Team – A. Nasser
Reported By	QA Engineer
Preconditions	User is on the Registration page.
Steps to Reproduce	1. Fill in valid name and a unique email. 2. Enter password '123'. 3. Submit the form.
Expected Result	The system should reject the password for not meeting the minimum complexity rule (8+ characters, letter + number).
Actual Result	The account is created successfully with the weak password; no complexity check is enforced client- or server-side.
Evidence / Attachments	Screenshot of successful registration with '123' as password; request payload capture.

BUG-002 — No account lockout after repeated failed login attempts

Linked Test Case	TC-007
Module	Login
Environment	Staging environment — https://staging.quickbite-demo.app , API v1.4, seeded test database, sandbox payment gateway.
Severity	Critical
Priority	Highest
Bug Type	Security
Reproducibility	Always
Status	In Progress
Assigned To	Backend Team – M. Youssef
Reported By	QA Engineer
Preconditions	A registered account exists.
Steps to Reproduce	1. Attempt login with an incorrect password 5+ times in a row. 2. Attempt again with the correct password.
Expected Result	Account should be locked or throttled after 5 failed attempts within 15 minutes, per REQ-002.

Actual Result	Unlimited login attempts are allowed; the correct password succeeds on any attempt regardless of prior failures.
Evidence / Attachments	Log of 8 consecutive attempts with timestamps; screen recording of successful login after 7 failures.

BUG-003 — Cached protected page accessible via browser Back after logout

Linked Test Case	TC-010
Module	Logout
Environment	Staging environment — https://staging.quickbite-demo.app , API v1.4, seeded test database, sandbox payment gateway.
Severity	High
Priority	High
Bug Type	Security
Reproducibility	Always
Status	Fixed
Assigned To	Frontend Team – S. Hassan
Reported By	QA Engineer
Preconditions	User has an active session and then logs out.
Steps to Reproduce	1. Log in and open any protected page (e.g., Order History). 2. Log out. 3. Click the browser Back button.
Expected Result	Protected page should not be accessible; user should be redirected to login.
Actual Result	The previous protected page renders from browser cache with user data visible until a manual refresh forces a redirect.
Evidence / Attachments	Screen recording showing cached data visible after logout via Back navigation.

BUG-004 — Expired password reset link still allows password change

Linked Test Case	TC-013
Module	Account Recovery
Environment	Staging environment — https://staging.quickbite-demo.app , API v1.4, seeded test database, sandbox payment gateway.
Severity	High
Priority	High
Bug Type	Security
Reproducibility	Always
Status	Open
Assigned To	Backend Team – A. Nasser
Reported By	QA Engineer
Preconditions	A password reset link was generated more than 30 minutes ago.
Steps to Reproduce	1. Request a password reset.

	2. Wait past the 30-minute expiry window. 3. Open the link and submit a new password.
Expected Result	The link should be rejected as expired, per REQ-004.
Actual Result	The expired link still opens the reset form and successfully updates the password.
Evidence / Attachments	Timestamped request log; screenshot of successful password change 45 minutes after the link was issued.

BUG-005 — Unsupported file type accepted for profile picture upload

Linked Test Case	TC-015
Module	Profile
Environment	Staging environment — https://staging.quickbite-demo.app , API v1.4, seeded test database, sandbox payment gateway.
Severity	Medium
Priority	Medium
Bug Type	Functional / Security
Reproducibility	Always
Status	Fixed
Assigned To	Frontend Team – S. Hassan
Reported By	QA Engineer
Preconditions	User is on the Profile page.
Steps to Reproduce	1. Click 'Change profile picture.' 2. Select a file with a .exe extension. 3. Upload.
Expected Result	Upload should be rejected with a 'Supported formats: JPG, PNG' message, per REQ-005.
Actual Result	No client-side format check occurs; the upload request is sent to the server with the invalid file type.
Evidence / Attachments	Network request capture showing the .exe upload request; screenshot of the file picker with no format restriction.

BUG-006 — Server error when searching with SQL meta-characters

Linked Test Case	TC-019
Module	Search
Environment	Staging environment — https://staging.quickbite-demo.app , API v1.4, seeded test database, sandbox payment gateway.
Severity	Medium
Priority	Medium
Bug Type	Functional / Security
Reproducibility	Always
Status	Closed
Assigned To	Backend Team – M. Youssef

Reported By	QA Engineer
Preconditions	User is on the Search page.
Steps to Reproduce	1. Enter %' OR '1'='1 in the search field. 2. Submit the search.
Expected Result	Input should be sanitized; an empty-state or filtered result should be returned without a server error.
Actual Result	The server returns a generic error page; response latency spikes noticeably, suggesting unsanitized input reaches the query layer.
Evidence / Attachments	HAR file of the failed request; response time comparison against a normal search.

BUG-007 — Combined filters are not applied cumulatively

Linked Test Case	TC-023
Module	Filters
Environment	Staging environment — https://staging.quickbite-demo.app , API v1.4, seeded test database, sandbox payment gateway.
Severity	Medium
Priority	Medium
Bug Type	Functional
Reproducibility	Always
Status	Open
Assigned To	Frontend Team – S. Hassan
Reported By	QA Engineer
Preconditions	User has an unfiltered restaurant list.
Steps to Reproduce	1. Select a price filter. 2. Select a rating filter. 3. Select a cuisine filter. 4. Observe the results.
Expected Result	Results should reflect all three filters applied together (AND logic), per REQ-007.
Actual Result	Only the most recently selected filter is applied; earlier selections are silently overwritten.
Evidence / Attachments	Screen recording showing filter state reverting to a single active filter.

BUG-008 — Out-of-stock item can be added to the cart and ordered

Linked Test Case	TC-030
Module	Cart
Environment	Staging environment — https://staging.quickbite-demo.app , API v1.4, seeded test database, sandbox payment gateway.
Severity	High
Priority	High
Bug Type	Functional
Reproducibility	Intermittent

Status	In Progress
Assigned To	Backend Team – A. Nasser
Reported By	QA Engineer
Preconditions	An item is marked out-of-stock in the backend.
Steps to Reproduce	1. Load a menu page where an item later becomes out-of-stock (stale page state). 2. Click Add to Cart on that item. 3. Proceed toward checkout.
Expected Result	The add action should be blocked with an 'Item unavailable' message, per REQ-009.
Actual Result	The item is added successfully and included in the order total; no availability re-check occurs before checkout.
Evidence / Attachments	Video showing the item added and priced despite being flagged unavailable in the admin test panel.

BUG-009 — Negative quantity accepted in cart quantity field

Linked Test Case	TC-034
Module	Cart
Environment	Staging environment — https://staging.quickbite-demo.app , API v1.4, seeded test database, sandbox payment gateway.
Severity	High
Priority	High
Bug Type	Functional / Boundary
Reproducibility	Always
Status	Fixed
Assigned To	Frontend Team – S. Hassan
Reported By	QA Engineer
Preconditions	Cart has an item with an editable quantity input.
Steps to Reproduce	1. Click directly into the quantity field. 2. Type -3. 3. Confirm/blur the field.
Expected Result	Input should be rejected or clamped to a minimum of 0/1, per REQ-009.
Actual Result	The negative value is accepted, producing a negative line total and an incorrect overall cart total.
Evidence / Attachments	Screenshot of the cart showing a negative line total and an incorrect grand total.

BUG-010 — Checkout proceeds despite order total below the configured minimum

Linked Test Case	TC-037
Module	Checkout
Environment	Staging environment — https://staging.quickbite-demo.app , API v1.4, seeded test database, sandbox payment gateway.
Severity	Medium
Priority	Medium

Bug Type	Functional
Reproducibility	Always
Status	Fixed
Assigned To	Backend Team – M. Youssef
Reported By	QA Engineer
Preconditions	Cart total is below the configured minimum order value (e.g., \$3 < \$5).
Steps to Reproduce	1. Add a single low-cost item to the cart. 2. Proceed to checkout.
Expected Result	Checkout should be blocked with a message stating the minimum order value, per REQ-010.
Actual Result	Checkout proceeds normally to the payment step with no minimum-order check performed.
Evidence / Attachments	Screen recording of checkout completing with a \$3.00 order total.

BUG-011 — Expired card is authorized by the sandbox payment gateway

Linked Test Case	TC-041
Module	Payment
Environment	Staging environment — https://staging.quickbite-demo.app , API v1.4, seeded test database, sandbox payment gateway.
Severity	Critical
Priority	Highest
Bug Type	Functional / Financial
Reproducibility	Always
Status	Fixed
Assigned To	Payments Team – R. Adel
Reported By	QA Engineer
Preconditions	User is at the payment step.
Steps to Reproduce	1. Enter a card with an expiry date in the past. 2. Submit payment.
Expected Result	Payment should be rejected client-side with a 'Card expired' message before reaching the gateway, per REQ-011.
Actual Result	The sandbox gateway authorizes the transaction and the order is created despite the expired date.
Evidence / Attachments	Screenshot of the successful order confirmation using a card expired '01/20'.

BUG-012 — Live order tracking status does not update in real time

Linked Test Case	TC-046
Module	Order Tracking
Environment	Staging environment — https://staging.quickbite-demo.app , API v1.4, seeded test database, sandbox payment gateway.
Severity	High

Priority	High
Bug Type	Functional
Reproducibility	Always
Status	Open
Assigned To	Backend Team – A. Nasser
Reported By	QA Engineer
Preconditions	An active order exists and is open in the tracking view.
Steps to Reproduce	1. Open the live tracking view for an active order. 2. Update the order's backend status to 'Delivered.' 3. Wait, then manually refresh.
Expected Result	The tracking view should update to reflect the new status within a few seconds, per REQ-013.
Actual Result	The view remains stuck on 'Preparing' even after a manual refresh; status only updates after a full app restart.
Evidence / Attachments	Screen recording spanning the backend status change and the stale UI.

BUG-013 — Users continue to receive promotional notifications after opting out

Linked Test Case	TC-049
Module	Notifications
Environment	Staging environment — https://staging.quickbite-demo.app , API v1.4, seeded test database, sandbox payment gateway.
Severity	Low
Priority	Medium
Bug Type	Functional / Compliance
Reproducibility	Always
Status	Closed
Assigned To	Backend Team – M. Youssef
Reported By	QA Engineer
Preconditions	User has disabled promotional notifications in settings.
Steps to Reproduce	1. Disable 'Promotional notifications' in account settings. 2. Trigger a test promotional campaign from the admin panel.
Expected Result	The opted-out user should not receive the promotional notification, per REQ-014.
Actual Result	The user still receives the promotional push despite the opt-out setting being saved as disabled.
Evidence / Attachments	Settings screenshot showing opt-out enabled; notification receipt log with matching timestamp.

BUG-014 — Address linked to an active order can be deleted, breaking the order

Linked Test Case	TC-053
Module	Address Book

Environment	Staging environment — https://staging.quickbite-demo.app , API v1.4, seeded test database, sandbox payment gateway.
Severity	High
Priority	High
Bug Type	Negative / Data Integrity
Reproducibility	Always
Status	Reopened
Assigned To	Backend Team – A. Nasser
Reported By	QA Engineer
Preconditions	An active, undelivered order is linked to a saved address.
Steps to Reproduce	1. Place an order using a specific saved address. 2. Go to Address Book and delete that same address while the order is still active.
Expected Result	Deletion should be blocked with an explanatory message, per REQ-015.
Actual Result	The address is deleted successfully; the active order's delivery details reference a non-existent address, breaking the tracking view.
Evidence / Attachments	Before/after screenshots of the order detail page showing a broken address reference. Reopened: initial fix only blocked the UI button, API endpoint still allowed deletion.

BUG-015 — Promo code discount applies below its stated minimum order value

Linked Test Case	TC-056
Module	Promotions
Environment	Staging environment — https://staging.quickbite-demo.app , API v1.4, seeded test database, sandbox payment gateway.
Severity	Medium
Priority	Medium
Bug Type	Functional / Financial
Reproducibility	Always
Status	In Progress
Assigned To	Backend Team – M. Youssef
Reported By	QA Engineer
Preconditions	Cart total is below the promo code's minimum order requirement.
Steps to Reproduce	1. Add items totaling \$8 to the cart. 2. Apply promo code SAVE15 (minimum order \$15).
Expected Result	The code should be rejected with the minimum order requirement stated, per REQ-016.
Actual Result	The discount is applied successfully despite the cart total being below the required minimum.
Evidence / Attachments	Screenshot of the order summary showing the discount applied on an \$8.00 cart.

BUG-016 — Server error page exposes stack trace and internal file paths

Linked Test Case	TC-058
-------------------------	--------

Module	Error Handling
Environment	Staging environment — https://staging.quickbite-demo.app , API v1.4, seeded test database, sandbox payment gateway.
Severity	Medium
Priority	Medium
Bug Type	Security
Reproducibility	Intermittent
Status	Open
Assigned To	Backend Team – A. Nasser
Reported By	QA Engineer
Preconditions	A backend condition forces an HTTP 500 response.
Steps to Reproduce	1. Submit a request known to trigger a server-side exception (e.g., malformed payment payload). 2. Observe the returned error page.
Expected Result	A generic, user-friendly error page should be shown with no internal details exposed.
Actual Result	The error response includes a partial stack trace and internal file paths in the page body.
Evidence / Attachments	Screenshot and raw HTTP response body of the 500 error.

BUG-017 — SQL injection payload in login email field causes unhandled server error

Linked Test Case	TC-060
Module	Security
Environment	Staging environment — https://staging.quickbite-demo.app , API v1.4, seeded test database, sandbox payment gateway.
Severity	Critical
Priority	Highest
Bug Type	Security
Reproducibility	Always
Status	Open
Assigned To	Backend Team – M. Youssef
Reported By	QA Engineer
Preconditions	User is on the Login page.
Steps to Reproduce	1. Enter 'admin'-- in the Email field. 2. Enter any value in Password. 3. Submit.
Expected Result	Input should be safely rejected/escaped; login should fail with a generic invalid-credentials message, per REQ-017.
Actual Result	The request reaches the backend unsanitized and returns a 500 error that exposes part of the underlying query.
Evidence / Attachments	HAR file of the request/response; redacted screenshot of the partial query text in the error response. Confirmed as an authorized black-box finding — no exploitation beyond confirming the response behavior was performed.

BUG-018 — Checkout submit button is cut off / overlapped at tablet width

Linked Test Case	TC-064
Module	UI/Responsiveness
Environment	Staging environment — https://staging.quickbite-demo.app, API v1.4, seeded test database, sandbox payment gateway.
Severity	Low
Priority	Low
Bug Type	UI
Reproducibility	Always
Status	Open
Assigned To	Frontend Team – S. Hassan
Reported By	QA Engineer
Preconditions	N/A
Steps to Reproduce	1. Set the viewport to 768px width (tablet). 2. Navigate to the Checkout page.
Expected Result	The submit button and all fields should be fully visible and usable, per REQ-018.
Actual Result	The checkout submit button is partially cut off and overlapped by the order summary panel at this breakpoint.
Evidence / Attachments	Screenshot of the Checkout page at 768px showing the overlapping elements.

3. Severity Distribution
